Beago Bites **Food delivery proposal**	
Proposal overview	Beago Bites will be an on-demand food delivery service operating in all major cities in Bealand. A specially designed 'Beago Bites' mobile app will allow users to order food from restaurants and food outlets which are signed up to the Beago Bites app. Orders will be placed through the app and delivered to the customer's location of choice. The app will allow users to browse menus, place orders and track their delivery in real time. We will partner with a wide range of local and national restaurants and food outlets across Bealand to offer customers a wide choice of food which is delivered to their homes quickly and efficiently.
Business proposition	Food delivery services have enjoyed significant global growth over the past five years. Research shows significant growth potential in the food delivery market in Bealand in the next decade. Once an order is placed on the app, it is directed to the selected restaurant/food outlet who will confirm the order, prepare the food, and a Beago driver will be notified to pick up the order and deliver it to the requested destination. Revenues will be generated from commission charged to each restaurant/food outlet registered on the app and from our normal driver delivery fee.
Investment needs	– A Beago Bites business unit will be set up to manage this new division. – This will be housed in a newly built state of the art head office facility in Bealand's capital city. – A new Beago Bites app will be developed. – Over 300 new employees across all of the major business functions will be employed in the new business division. – Significant marketing expenditure is anticipated for pre-launch. – Estimated $350 million long-term loan required to finance the proposal.
Proposal aims and long-term outcome	– Bring communities together through facilitating the connection of restaurants and food outlets with customers. – Create new driver opportunities. We will be encouraging food delivery drivers to use our micro mobility options free of charge to deliver food orders in a more sustainable way. – Establish new relationships with local businesses. – Increased data availability – analytics staff will be analysing routes and customer and driver behaviour in relation to the new service. – Anticipated to increase current revenue by 8% p.a.
